Blockchain technology provides superior security for digital or cryptocurrency than the traditional banking system. Robbery, hijacking, and systemic issues are all issues that need to be addressed.

Decentralization is used to solve the failure. There are digital currencies. The most significant factor is the dominance of a single institution, such as a bank, in a market, the traditional system has come to an end as a result of decentralization

A cryptocurrency is a type of digital asset that is based on a network that spans a huge number of computers. They can exist outside the control of governments and central authorities because of their decentralized structure.

Bitocoin will play a significant part in this ecosystem as a cryptocurrency. It will be the Trading Platform where the people are allowed to make nearly free payments to anyone in the world providing the most exclusive benefits than its competitor Bitcoin.

INTRODUCTION

Cryptocurrencies are fast gaining in value as the world becomes more digitalized. To alleviate the problems of traditional physical systems, everything is going towards digitalization.

At the same time, time currencies will become digital assets rather than physical currency notes. Surprisingly, compared to actual currency, digital currencies are more secure thanks to contemporary technology.

Bitocoin is a fully decentralized platform allowing people to control their finances in a highly secured network. Bitocoin Blockchain provides higher transaction volume in a more secured and fast way than Bitcoin.

DECENTRALIZED PLATFORM

Decentralization refers to a multi-point system in which individual points have a high degree of autonomy. These points are capable of forming new units by connecting.

Each of these sites can be the system's core from time to time, but they don't have to be. Through the network, their interactions create a nonlinear causal relationship. Each investor can be viewed as a single point in a decentralized network, allowing them to conduct digital asset transactions with others without limitation.

With its frequent blockchain integration and secured transactions, Bitocoin is overwhelming its counterpart Bitcoin.

BITOCOIN

Coin name: Bitocoin
Ticker Symbol: BTO
Algorithm: QUARK
Type: Proof of Stake
Block reward: 50 BTO
